Reading Research Registry

Improving Reading, Improving Learning, Improving Lives

Is your child struggling to learn to read?

Does your child get extra help in school, but is not learning to read?

Is your child bright and curious about the world but unable to break the code of the written word?

Parents are often the first to feel that something is not right in their child's learning.

Many children who struggle with reading often have limited ability to read and write through no fault of their own.

These children have the right to participate fully in all aspects of their life and education regardless of their reading difficulties.

Please consider joining the Reading Research Registry.

Together we can improve reading, improve learning, and improve lives.

Struggling Readers

It is hard for some children to learn how to read. But for a few it is even harder than most. About 5% of children with reading disabilities do not improve even with the best help. These children can do a lot of things but they struggle learning how to read. Often they have other family members who had learning problems.

The Reading Research Registry wishes to serve individuals who struggle with reading.

Join the Reading Research Registry

You can directly help efforts to improve our understanding of reading problems by joining the Reading Research Registry. The Reading Research Registry is a nationwide database of families who are interested in contributing to reading research.

Why research?

Research will help us understand reading and the difficulties that may occur in learning to read. Because people like you take part in research studies, we now know better ways to help many children who have problems learning to read.

There is still a great need, however, for research in the area of reading.

How does the Registry work?

Families who join the Reading Research Registry will be invited to take part in research projects on reading.

The Reading Research Registry will contact members when studies become available. Members may then choose which studies, if any, they would like to participate in.

The results of these studies will help improve understanding and instruction of reading, creating more reliable resources for families who are affected by reading difficulties.

Benefits to You

Registry members and their families will have access to websites, organizations, books, and other sources of help.

These resources are screened by scientists and education experts so that the registry members have the best available information.

How to Join. It's easy.

There are no fees or cost for joining. All information will be kept completely confidential.

Contact the Reading Research Registry to receive the Application and Consent Forms.
